

Press Release

Quintel and Symena Co-operate

Leading antenna technology and leading radio planning optimisation combine resources

12 December 2006, VIENNA, Austria and FARNBOROUGH, England

Quintel Technology, producer of innovative antenna technologies for mobile phone networks and Symena, developers of automated network optimisation software announced a co-operation agreement today. The objective is for Symena to provide Quintel with support in demonstrating the very significant value in their antenna sharing technologies. The first fruit of the relationship, an article issue of Wireless Europe (<http://wireless.iop.org/>) that quantifies some of the benefits of using Quintel's Antenna Technology innovations, was published in September.

"We were looking for the best way to demonstrate the benefits of our shared antenna system," said David Barker Director Technology Applications at Quintel. "We needed software that could jointly and automatically find the best plan for linked multiple radio networks. That is what we found in Symena's Capesso™ product. The Multi-System Optimisation function in Capesso™ was unique and very effective in this regard."

"Symena is always looking for ways to extend our technology. Quintel's innovated antenna sharing technology and its planning requirement is just one case where Capesso™ can be used to find the best plan for multiple radio networks jointly," said Dr Thomas Neubauer, Managing Director of Symena. "Quintel's cutting edge technology provides an excellent showcase for Capesso™'s extremely powerful optimisation capability."
